What Is Percocet 10/325mg?

Percocet 10/325mg is a widely used pain relief medication that combines **Oxycodone (10mg)** and **Acetaminophen (325mg)**. Oxycodone acts as an opioid pain reliever that changes how your brain and nervous system respond to pain, while Acetaminophen helps enhance the pain-relieving effect and can reduce fever. Together, they deliver balanced and effective relief from moderate to severe pain.

Generic Name and Composition

The generic form of Percocet is **Oxycodone-Acetaminophen**. Each tablet of Percocet 10/325mg contains:

- **Oxycodone Hydrochloride 10mg** – opioid pain reliever
- **Acetaminophen 325mg** – non-opioid analgesic and fever reducer

This specific combination is clinically proven to provide targeted and reliable relief from both acute and chronic pain.

How Percocet 10/325mg Works
